Bina Dhan 17

(C418/(ZHONG413)2//SH

109/(ZHONG413)2)*

Product Profile

A high yielding, early maturity, medium height, and medium slender variety, developed at Bangladesh Institute of Nuclear Agriculture in collaboration with IRRI. This variety is recommended for irrigated mid early conditions. Being a green super rice, Bina Dhan 17 requires 25-30% less inputs (water, fertilizers etc), thus it fits into climate smart agriculture. Grain is suitable for puffed rice. Resistance to BLB and sheath blight are the other advantages of this variety.

Priority Market Segment-TEM-I

Planting Method		Ecosystem		
PTR	DSR	Irrigated Lowland	Rainfed Lowland	Upland
Recommended	Not Recommended	Recommended	Not Recommended	Not Recommended

Positioning

Position	Irrigated Lowland	Rainfed Lowland	Upland
Replace	MTU 1010	None	None
Companion	MTU 1156	None	None

Key Strengths

- Excellent yield
- Low input responsive
- Medium slender heavy grain
- Early maturity
- Resistant to BLS and Sheath blight

Considerations

- In some exceptional cases, lodging is reported

Relative Variety Performance - Grain Yield and Agronomic Traits

Variety	Grain yield		Maturity (days)	Plant height (cm)	Lodging	HRR %	Amylose content %	1000 grain weight (g)
	(Kg/ha)	% Adv						
Bina Dhan 17	5500-6000	33	118-120	100-105	Tolerant	62	23	26
CottondoraSannalu (MTU-1010)	4000-4500		115-120	105-108	Tolerant	57	23	24

Relative Variety Performance - Biotic and Abiotic Stress

Variety	Leaf blast	Leaf blight	Brown plant hopper	Sheath blight	Drought
Bina Dhan 17	Resistant	Resistant	Resistant	Tolerant	Tolerant
CottondoraSannalu (MTU-1010)	Tolerant	Susceptible	Susceptible	Susceptible	Susceptible

Producibility: Bina Dhan 17 = 2400Kgs. / acre

Recommendation: Released for cultivation in Assam, Tripura & West Bengal. Suitable for Odisha and Chhatisgrarh also.

*Parental line (s) from IRRI germplasm
